

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A method for manipulating a map using a data processing system, comprising:

displaying a first map in one area of a display, wherein the first map is a vector map;

displaying a second map in a second area of the display, wherein the first map and the second map depict at least a portion of an identical geographic region;

making a first annotation on a first region of the first map;

determining a geographic region on the second map corresponding to the first region; and

adding a second annotation to the second map at the determined geographic region.

2. (Previously Presented) The method of claim 1 further comprising selecting the second map.

3. (Previously Presented) The method of claim 1 further comprising selecting the first map.

4. (Previously Presented) The method of claim 1 further comprising receiving a display of the second map that is automatically associated with the first map.

5 - 6. (Canceled)

7. (Previously Presented) The method of claim 1 wherein the second map is a digital raster map.

8. (Previously Presented) The method of claim 1 wherein the second map is a vector map.

9. (Original) The method of claim 1 wherein the user directs the manipulation of the first map.

10. (Original) The method of claim 1 wherein the user directs the manipulation of the second map.

11. (Previously Presented) The method of claim 1 further comprising receiving a display of a second region associated with the second map, the second region being geographically substantially similar to the first region of the first map.

12. (Original) The method of claim 1 further comprising changing a view of the first map.

13. (Original) The method of claim 12 further comprising receiving a display of the first map in response to the user interaction to create a responsive display, the responsive display being representative of the user interaction.

14. (Original) The method of claim 13 further comprising receiving a display of the second map, the display of the second map being representative of the responsive display of the first map.

15. (Previously Presented) A computer readable medium containing instructions executable by a computer to manipulate a map, the method comprising:  
displaying a first map in one area of a display, wherein the first map is a vector map;  
displaying a second map in a second area of the display, wherein the first map and the second map depict at least a portion of an identical geographic region;  
making a first annotation on a first region of the first map;  
determining a geographic region on the second map corresponding to the first region; and  
adding a second annotation to the second map at the determined geographic region.

16. (Previously Presented) The computer-readable medium of claim 15, wherein the method further comprises enabling viewer referencing of at least the first map.

17. (Previously Presented) The computer-readable medium of claim 15, wherein the method further comprises:  
receiving a command to change a map view; and  
receiving a responsive display of the first map, the responsive display being representative of the user interaction.

18. (Previously Presented) The computer-readable medium of claim 15, wherein the method further comprises receiving a display of a second region on the second map, the second region being geographically substantially similar to the first region.

19. (Previously Presented) An apparatus for manipulating a map, comprising:  
means for displaying a first map in one area of a display, wherein the first map is a vector map;  
means for displaying a second map in a second area of the display, wherein the first map and the second map depict at least a portion of an identical geographic region;  
means for making a first annotation on a first region of the first map;

means for determining a geographic region on the second map corresponding to the first region; and

means for adding a second annotation to the second map at the determined geographic region.

20. (Previously Presented) The apparatus of claim 19 further comprising:  
means for receiving a command to change a view;  
means for receiving a responsive display of the first map, the responsive display being representative of the user interaction; and  
means for receiving a display of a second region on the second map, the second region being geographically substantially similar to the first region.
